# Lone's EFT DMA Radar Setup

*****Make sure your DMA Card is setup first! See **DMA_SetupGuide.pdf***

Game PC Setup

1. Run the **SETUP_GAME_PC.bat** script (Run as Admin) on your **GAME PC.**

   a. This script is in the *Setup* folder in the Lone's Client Download. It is also in the **#downloads** channel in Discord.

   b. IMPORTANT: This script must be run as Administrator. Right click the file -> Run-As-Admin.

   c. If the script was successful, it will cause your PC to Reboot (this is normal).

   d. NOTE: This script does not change anything remotely unsafe. It just changes some **common** Windows settings to allow optimal DMA usage.

2. **IMPORTANT:** Turn **OFF** Auto Ram Cleaner in EFT Game Settings. If you do not do this your game *may* crash if you are using Memory Writes.

Radar PC (2nd PC) Setup

1. Run the **SETUP_RADAR_PC.bat** script (Run as Admin) on your **RADAR PC.**

   a. This will install the required runtimes for the Radar Software to run properly.

   b. Follow the prompts and if successful, the output should look like below:

   i. NOTE: If the runtimes are already installed, it will note this.

c.

d. If you want to **manually** install the runtimes, we require:

    i. [ASP.NET Core 9 Runtime (win x64)](#)

    ii. [.NET9 Desktop Runtime (win x64)](#)

    iii. [Visual C++ Redist 2015-2022 (x64)](#)

2. *(Recommended)* Disable your Radar PC Anti-Virus Software.

a. You may not need to do this, but sometimes Anti Virus Software / Windows Defender will block remotely loading our software.

b. If you're using Windows Defender you may look at [Defender Control](#).

c. We take your privacy very seriously, and we do not install any malicious software on your system. We only collect the following non-personally identifying information from you:

    i. Your System Hardware ID.

    ii. Your IP Address and connection details.

    iii. Your Discord Username/Avatar (once authorized by you during OAuth).

3. Launch **Lones-Client.exe** to start the Client Loader.

a. Select which game you want to launch and hit **Connect** to Authenticate & Start the Radar.

b.

c. The first time you connect, a web page should open asking you to connect your Discord Account to **Lone's Client**. Do this with the Discord Account that has your subscription attached to it.

d.
4. The Radar will now launch.
    a. If there are any issues with your DMA Connection, you *may* get an error. See the **DMA Setup Guide** for DMA troubleshooting steps.
    b. A memory map **(mmap.txt)** will be generated on first run, and will be saved in your radar folder.
    c. If you re-install Windows or change hardware in your **Game PC**, it is recommended to delete **mmap.txt** and regenerate a new memory map, and also delete the **Symbols** folder.
        i. You can do all of this automatically with the **Reset DMA Config** option in the *Options Menu.*
5. For frequently asked questions and more information, please see the Discord Community.
    a. NOTE: Most of the **Radar Features** have mouseover tooltips!

Enjoy! Please visit us in Discord if you require Support/Assistance.
